QUIZIAN • PROTOTYPE REVISION

A clearer, more consistent student experience

Updated concept based on the screens in your pitch deck. The main study flow stays the same, but navigation, hierarchy and screen consistency are improved.

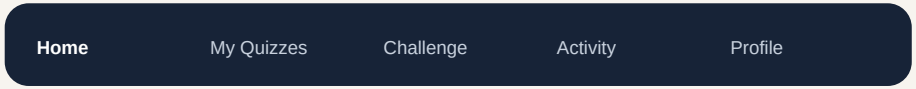
DESIGN CONCEPT

Warm, focused, and friendly

Use a calm cream background, dark navy text, and orange as the main action color. Green is reserved for correct answers and successful states.

Cream Navy Orange Green Soft gray

FIXED NAVIGATION



Keep these five tabs in the same order on every main screen. Put account preferences inside Profile instead of opening a side menu that covers the page.

WHAT CHANGED

1. Navigation

Replace the hidden hamburger menu and inconsistent tabs with one fixed bottom navigation.

2. Home screen

Show the two primary actions immediately: Create a quiz and Challenge a friend.

3. Quiz workflow

Separate quiz creation from saved quizzes; make upload, question settings, preview and save steps clear.

4. Challenge flow

Choose a saved quiz, set players and time, create a room code, then invite friends.

5. Game and results

Use a clear progress bar, readable answers, timer, score summary and leaderboard.

6. Profile and settings

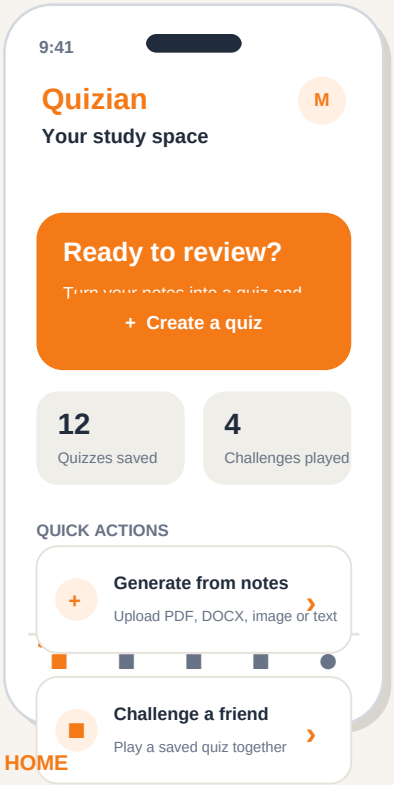
Move personal details, notifications, appearance and logout into one dedicated Profile tab.

01 / MAIN NAVIGATION

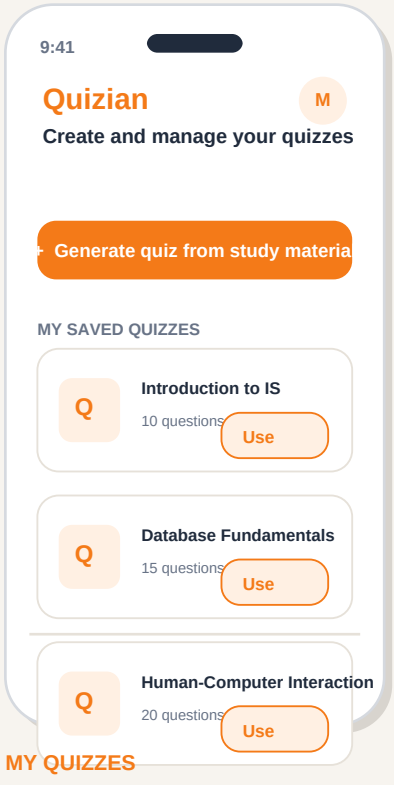
Home and My Quizzes

The Home screen should help students start quickly. My Quizzes should organize generated and saved question sets in one place.

Recommended behavior
• The Create a quiz button opens the upload-and-generate flow.
• Recent quizzes link to the saved quiz details.
• My Quizzes contains search, saved quizzes and a clear Generate action.
• Each quiz offers Preview, Edit and Challenge actions.



HOME



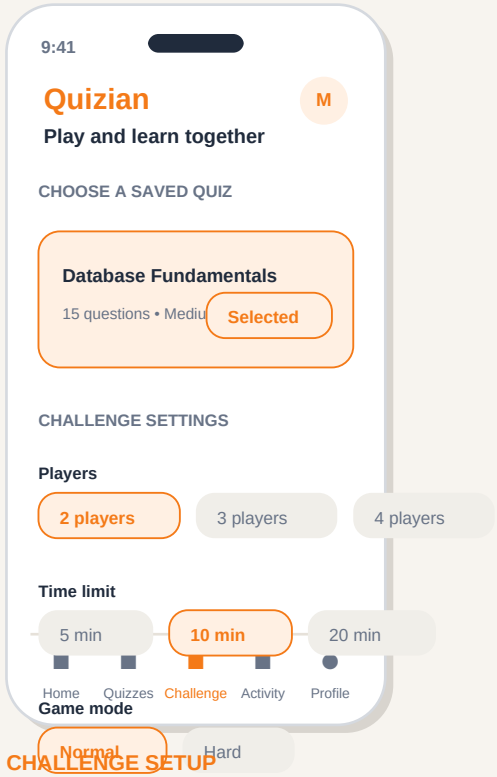
MY QUIZZES

Why this is better
Students do not need to guess where to create or find a quiz. The most-used actions are visible without opening a side menu.

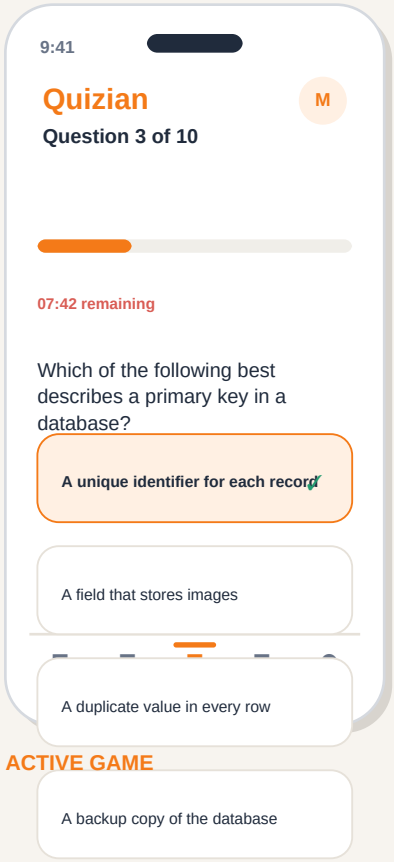
Challenge setup and gameplay

Keep the challenge flow focused: select a saved quiz, choose game settings, create a room, invite friends and play.

Recommended behavior
- Only saved quizzes can be selected for a challenge.
- Make participant count and time limit easy to change.
- After Create challenge, show a shareable room code and invite link.
- Show a clear waiting state until friends join.



CHALLENGE SETUP

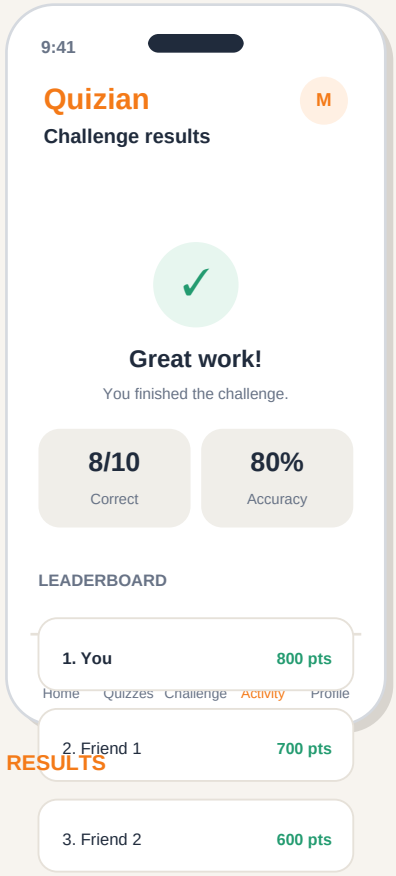


ACTIVE GAME

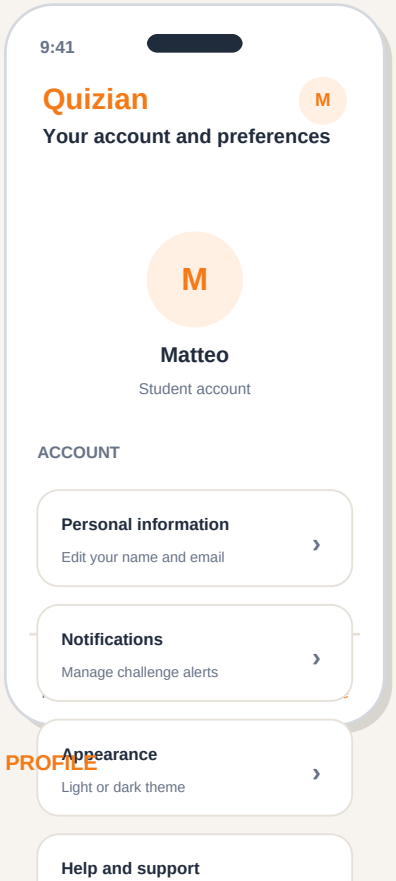
Gameplay improvements
- Display question number, progress and remaining time.
- Make answer options large enough to tap.
- Show feedback after an answer, then move to the next question.

Results, Activity and Profile

Give students a useful finish to each challenge and keep account controls separate from the study workflow.



RESULTS



PROFILE

Results screen
- Show score, correct answers and accuracy clearly.
- Rank participants consistently using earned points.
- Provide Play again and Back to Home actions.
- Activity keeps a history of completed challenges.

Profile and settings
- Edit personal information.
- Manage notifications and appearance.
- Place Help and support here.
- Keep Log out at the bottom and visually separate from normal actions.

04 / PROTOTYPE HANDOFF

Recommended navigation and screen flow

Use this as the implementation checklist when updating the clickable prototype in Figma, Canva or your website builder.

HOME	MY QUIZZES	CHALLENGE	GAME	RESULTS
Create quiz	Generate from notes	Select quiz	Question + timer	Score + accuracy
Recent quizzes	Saved quizzes	Players + timer	Progress	Leaderboard
Challenge friend	Preview / Edit	Create room	Answer feedback	Play again

ALWAYS AVAILABLE IN THE BOTTOM NAVIGATION

Home	My Quizzes	Challenge	Activity	Profile
Dashboard and shortcuts	Create, edit and save quizzes	Set up and join friend challenges	Past games and performance	Account and app preferences

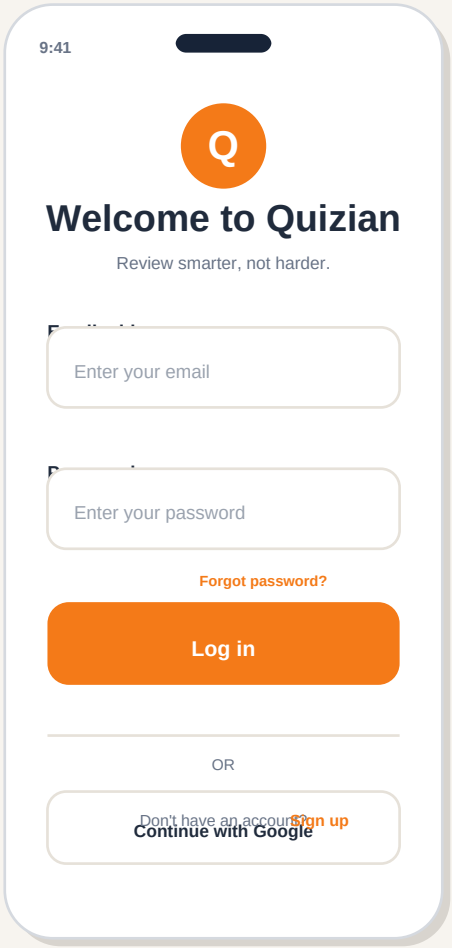
IMPORTANT PROTOTYPE NOTES

- Keep the same bottom navigation on all main screens; hide it only during focused gameplay if needed, with a visible back/exit action.
- Use consistent button labels: Create a quiz, Save quiz, Challenge a friend, Join challenge, Play again.
- Do not mix green and orange for ordinary buttons. Orange = primary action; green = success/correct feedback.
- Use realistic empty states: 'No saved quizzes yet' with a Generate quiz button; 'No active challenges' with a Create challenge button.
- Make the challenge room code easy to copy and share. Confirm before leaving an active game.

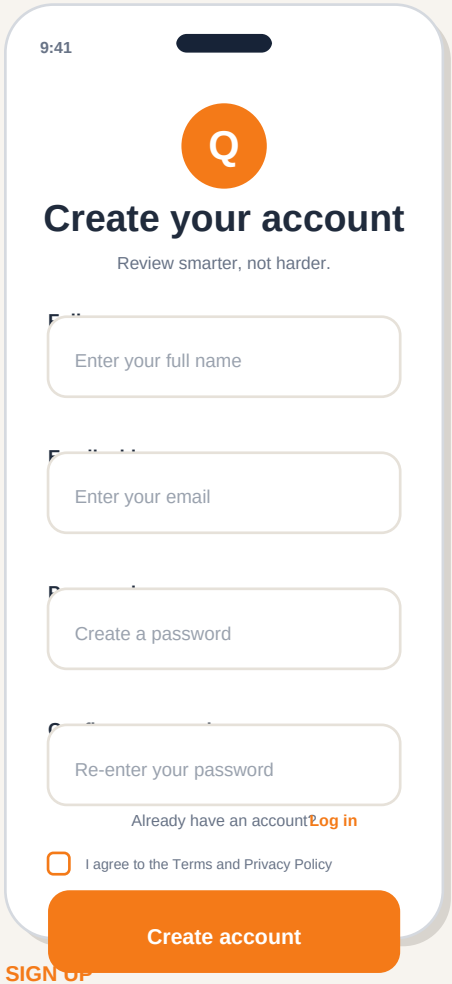
05 / ACCOUNT ACCESS

Login and Sign Up screens

Add a simple entry point before students reach the Quizian dashboard. Keep the same brand colors, rounded fields and clear actions used throughout the revised prototype.



LOGIN



SIGN UP

LOGIN SCREEN

- Quizian logo and short tagline.
- Email and password fields.
- Forgot password link.
- Main Log in button.
- Optional Google sign-in, only if supported.
- Link to create a new account.

SIGN UP SCREEN

- Full name, email, password and confirm password.
- Terms and Privacy Policy agreement.
- Create account button.
- Link back to Log in for existing users.

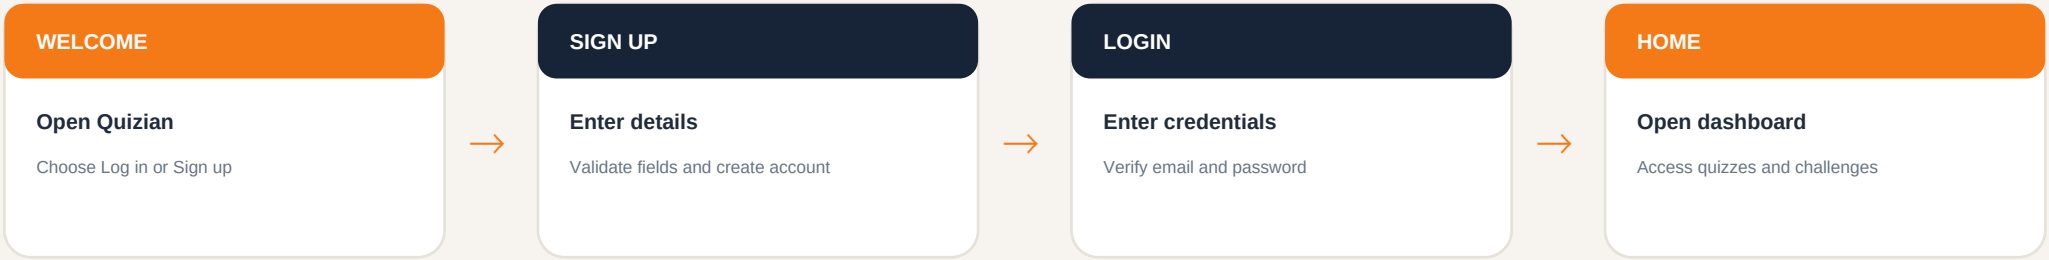
AFTER AUTHENTICATION

After a successful login or registration, send the student to the Home dashboard. Show clear validation messages for missing fields, invalid email, weak password or mismatched passwords. Never show a successful login before credentials are verified.

AUTHENTICATION FLOW

How students enter Quizian

A short and predictable flow helps first-time users register and returning students get back to studying quickly.



IMPORTANT DESIGN AND FUNCTION NOTES

- Use the same orange primary button style and cream background as the rest of Quizian.
- Keep password fields masked by default and include a show/hide password control in the working prototype.
- Provide clear messages: 'Please enter your email', 'Passwords do not match', and 'Incorrect email or password'.
- Add a Forgot password flow that lets users request a password reset; do not make the link decorative.
- After sign up, verify the account if required by the authentication service, then direct the user to Home.
